```
The present sequence represents the 5' flanking region of the human denosine triphosphate (ATP) binding cassette protein (ABC) I gene. ABCI resides in cell membranes and utilises ATP hydrolysis to transport a wide protein in the apolipoprotein-mediated mobilisation of intracellular protein in the apolipoprotein-mediated mobilisation of intracellular choiserrol stores. ABCI is defective in Tanglar disease, a genetic choiserrol stores. ABCI is defective in Tanglar disease, a genetic disorder characterised by abnormal HDL-folesterol metabolism. The ABCI gene is localised to chromosome 9422-9431. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of neart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and cother disorders associated with hypercholesterolemia.
                                         useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis
                         Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide.
                                                                                                                                                                       Claim 1; Page 143-144; 215pp; English.

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (AEC) 1 gene. ABC1 resides in cell membraces and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrace. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangler disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9q22-9q31. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and

                                                                                                                                                                                           The invention relates a nucleic acid which is capable of regulating the transcription of human ATP-binding cassette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholesterol metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances of the invention are used to screen candidate molecules or substances are used in antisense therapy. Compositions comprising sequences of the invention are used to treat inypercholesterolaemia and atherosclerosis. The present sequence is human ABC1 transcription regulating DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1644

The invention relates to an isolated human large ATP-binding cassette transporter 1 (ABC1) promoter capable of directing transcription of transporter 1 (ABC1) promoter capable of directing transcription of heterologous coding sequence positioned downstream to it. The hABC1 promoter is useful for expressing foreign DNA in a host cell, by introducing into the host cell a gene transfer vector comprising the promoter operably linked to a foreign DNA encoding a desired polypeptide or RNA, where the foreign DNA is expressed. The gene transfer can be introduced into the host cell by adenovirus infection, liposome mediated transfer topical application to the cell or microhisetion. The gene further involves introducing into the cell a gene transfer vector comprising a nucleic acid segment encoding a transactivator protein capable of upregulating the ABC1 promoter, or contacting the cell with the transactivator protein. With attensactivator protein, or an agonist of the transactivator protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3
                                                                                                                                                                                                                                                     Novel isolated human large ATP-binding cassette transporter 1 promoter capable of directing transcription of heterologous coding sequence positioned downstream to it, useful for expressing foreign DNA in host cells

                                                                                                                                                                              The invention relates a nucleic acid which is capable of regulating the transcription of human AIP-binding cassette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholesterol metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances that are capable of medilating the transcription of the ABC1 gene. They are used in antisense therapy. Compositions comprising sequences of the invention are used to treat hypercholesterolaemia and atherosclerosis. The present sequence is human ABC1 transcription regulating DNA.

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) I gene. ABCI resides in cell membranes and utilises ATP Aydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolioporotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tanglard ABCI is a pivotal cholesterol stores. ABCI is defective in Tanglard ABCI is a pivotal cholesterol stores. ABCI is defective in Tanglard ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes associated with hypercholesterolemia and atherosclerosis. The genes and proteins so to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0\bar{y}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding casette protein (ABC) I gene. ABCI resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stories. ABCI is defective in Tangiar disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9q22-9q31. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulace the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and cher disorders associated with hypercholesterolemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ASC1 expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition a lower than normal EDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels

The present invention describes an expressed sequence tag (EST), where the EST is an isolated, enriched, or purified nucleic acid sequence representing all or part of a gene, the expression of which, or its complementary sequence, in a cell identifies the cell as a developmentally competent or incompetent cell. Molecules which induce totipotence in one or more cells. Molecules which induce totipotence in one or more cells. Molecules which induce developmental incompetence in a cell line are useful for inducing totipotence. In a cell line are useful for preventing a full term pregnancy in an animal and inhibiting totipotence. The molecules are also useful for treating a disease in an animal by inducing development of one or more cells of the animal into a specific cell type. The present sequence represents a bovine EST which is given in the

The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases in length of a segment of chemically pretreated DNA (II) of genes associated with development selected from 87 genes listed in the specification such as ACCPN, ADRN, or AFD1 and comprising one of 350 caseful for the diagnosis or their complements. The invention is sequences (ABN79984-ABN80333) or their complements. The invention is caseful for the diagnosis or their complements. The invention is development genes, in particular disease related to homeobox containing genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes associated with congenital heart disease, epilepsy, diseases, related to histone deacetylation, Currarino syndrome, diseases related with the checking the proper specific to each of the genes are useful for detecting the colligomers specific to each of the genes are useful for detecting the methylation state of all CpG dinuclectides within the 350 sequences or (II) and their complementary sequences, as primer oligomuclectides for the application of the 350 sequences, (II) and/or their complements and case single nucleotide polymorphisms (SNDS).

CC Single nucleotide polymorphisms (SNDS).

CC Note: The sequence data for this patent did not form part of the princed specification but is based on sequence information supplied to Derwent by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel nucleic acid useful for diagnosis and therapy of diseases associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes associated with development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The invention relates to human polynuclectides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leuksemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

The production of other cytokines in other cell populations. The polypeptides are useful in quent therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
